

OBSERVATION COMPONENT

a CONTINUOUS multiplicative layer is required (a count-valued one is not differentiable under CRN, kept as a negative control)

THE THREE DISTORTION FAMILIES — one one-parameter family per component, in two declared sets

	base family	adversarial family
η_1 TRANSM.	$\beta SI/N \div [1 + \eta_1 (I/N)/p_{\text{ref}}]$	$\beta \rightarrow \beta e^{\eta_1}$
η_2 PROGR.	$\gamma \rightarrow \gamma e^{\eta_2 (t/T - 1/2)}$	$\gamma \rightarrow \gamma e^{-\eta_2}$
η_3 OBS.	$\rho \rightarrow \rho e^{\eta_3}$	$\rho \rightarrow \rho e^{\eta_3 (t/T - 1/2)}$
